

GST Polyclonal Antibody

Product Data sheet

PRODUCT INFORMATION

Catalog Number: GMTA802P
Size: 100ul
Format: Protein G purified
Raised in: Rabbit
Clone: Polyclonal antibody
Isotype: IgG
Storage: 2-8°C for up to 3 months.
Aliquot and stored at -20°C
for long term storage.
Avoid repeated
freeze/thaw cycle.

DESCRIPTION

Epitope tags are commonly used for labeling, detection and purification of recombinant proteins. Glutathione S transferases (GSTs) are a family of enzymes that play an important role in detoxification by catalyzing the conjugation of many hydrophobic and electrophilic compounds with reduced glutathione. The amino acid sequence GST is highly conserved in most organisms, including mammals. GST is a widely used fusion partner, since it provides both an easily detectable Tag and a simple purification process of interest. GeneMay's GST polyclonal antibody is developed using recombinant GST expressed in E. Coli. as antigen. It recognizes GST-tagged fusion protein in different expression system.

Western blot analysis of extracts from E. Coli cells expressing a protein containing a GST-tag, using GST Rabbit polyclonal antibody.

APPLICATION AND USAGE

Recommended Dilutions:

WB 1:1000

ELISA 1:4000

IHC N/A

Not tested in other applications.

**Each investigator is highly recommended to titrate the reagent to identify the optimal concentration for each application.*
